Pre-requirements

- At least 400MB disk space and 800MB memory
- Python package that you should be familiar with
 - *numpy*
 - *pytorch*
- Python packages that should be installed:
 - *pytorch*
 - *numpy*
 - *matplotlib*
- Anaconda is recommended

PyTorch

Pre-requirements

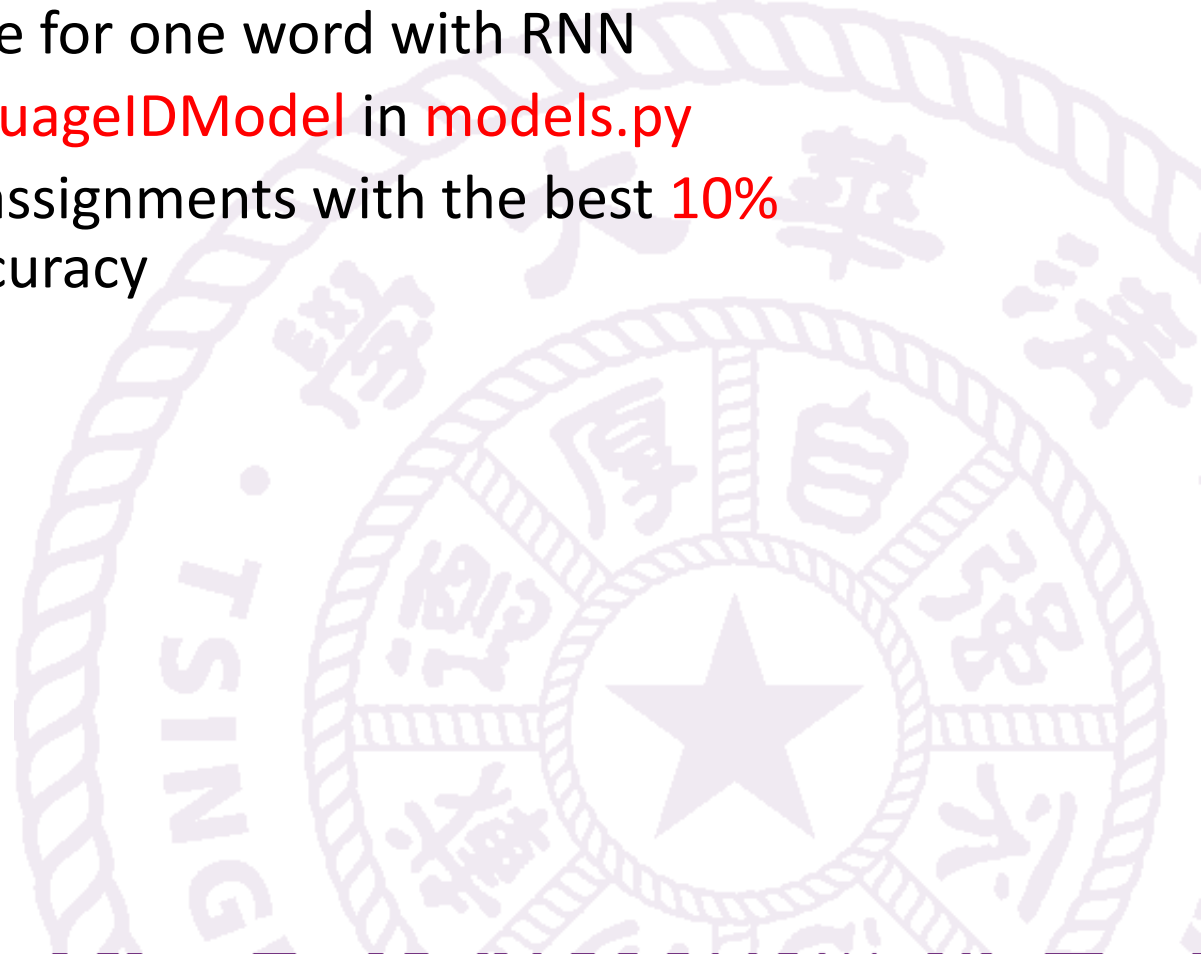

- Learn **PyTorch** framework
 - Run **PyTorch.ipynb** and learn how it works
 - <https://pytorch.org/docs/stable/index.html>
- About IPython Notebook
 - An interactive computational environment
 - code execution, rich text, plots rich media and etc.
- Startup (after the Anaconda is installed)
 - Run **ipython notebook --port 8888** in terminal
 - Open a browser and visit website **<http://localhost:8888>**
 - Input token/password given in your terminal

Basic Tasks (1)

- Digit Classification (4 points)
 - Train MNIST with ConvNet
 - Design a 5-layer convolutional network and implement `DigitClassificationModel` in `models.py`
- Non-Linear Regression (4 points)
 - Approximate $\sin(x), x \in [-2\pi, 2\pi]$
 - Implement `RegressionModel` in `models.py`
- Automatic Gradient Computation (3 points)
 - Generate adversarial examples of given images
 - Implement `DigitAttackModel` in `models.py`

Basic Tasks (2) & Bonus

- Language Identification (4 points + 1 bonus)
 - Identify language for one word with RNN
 - Implement `LanguageIDModel` in `models.py`
 - Extra credit for assignments with the best 10% classification accuracy

Submission

- A 1-3 pages report (either Chinese or English)
 - You MUST answer **Question 1 and 2** in **YOUR REPORT**
 - You will not get full report credits if cannot answer the above questions correctly
 - Some analysis on different algorithms/hyper-parameters is useful for better grading
- Zip the files as the following structure
 - student_id.zip (e.g. 20090112xx.zip)
 - student_id.pdf
 - models.py

Grading

- Due
 - 2023/6/25 23:59:59
 - For Senior/Graduate Students: 2023/6/11 23:59:59
- Correctness of algorithms (80%)
- Report (20%)
 - You MUST answer Question 1 and 2 in the report

谢谢！
